

# Better together: Microsoft Office 365 and Dropbox for Business

Microsoft has built a comprehensive suite of products to shape the world we work in, and as the world's largest repository of Office files, Dropbox and Microsoft make an unstoppable team. Dropbox is designed to work with the tools your team already uses, enabling over 400 million users to add and edit roughly 1 billion Office files each week. Combining this power with the freedom to work on any device, with any file type, Dropbox for Business and Office 365 just work.

## Fast facts

- ✓ With over 35 billion Microsoft Office files stored today, Dropbox holds more Microsoft Office files than even Microsoft's own platform, OneDrive
- ✓ Dropbox now integrates with Microsoft Active Directory so teams can automatically add new members to Groups, simplifying onboarding and IT management
- ✓ Dropbox earned 4.4 out of 5 stars from G2 Crowd—the highest rating given to any File Storage & Sharing business software

## Increase flexibility

While Microsoft has built a legacy on products like Office and Windows, Dropbox is solely focused on perfecting file sync and share, delivering up to 7x faster sync than OneDrive. And with a continuously developing partnership, exclusive features like the Dropbox badge for Microsoft Office enhance the experience that users have with the tools they already use.

## Connect devices to one another

Because work today doesn't just happen in the office, employees need a secure way to remotely access the files they store on their desktop computers. Whether your team works on iOS, Android, Blackberry, or Windows Phone, Dropbox has you covered. New Dropbox and Microsoft app integrations allows you to edit and sync Office files from the Dropbox mobile app, and access Dropbox files from the Office app. And when you're working online, open files directly to Office Online to edit seamlessly on the web, so that your team can do their best work with the best tools, in the office or on the go.
