

Complementary solutions: Google Apps for Work and Dropbox Business

In the last few years, Google has built an entire ecosystem for teams to work in, reaching almost every aspect of the modern workday. Combining this power with the freedom to work offline, on any device, and with any program, Dropbox Business helps you do more with the tools your team already uses. In fact, the majority of B2B IT decision-makers who use Google Apps also use Dropbox.*

Fast facts

Dropbox employees use Google Apps everyday to get work done and engineers at Google use Dropbox to sync their most important files on Linux.

Dropbox's plugin for Gmail allows you to add Dropbox links to your emails or save attachments directly to your Dropbox. All without ever leaving your inbox.

Work the way you want

With Google's real-time collaboration and Dropbox's best-in-class sync, your team will always have the most up to date version of the file they need at their fingertips. And because Dropbox is designed to work with widely used programs like Microsoft Office, you'll save your team the wasted time and frustration of importing and exporting files from one format to another.

Easy management and control

Dropbox's simple sharing tools and familiar user interface help users share files quickly and securely on the web and on desktop. And that sharing is tracked in comprehensive audit logs that admins can access at anytime. For teams working with sensitive data, it takes just one click for an admin to restrict sharing outside company walls, and another to remotely wipe a device or account, so you'll never lose track of your most important business data.
