

# Build an environment of seamless collaboration and security

Dropbox Business allows construction teams in the office and on the jobsite to access, edit, and share project files anytime, on any device. Granular sharing permissions streamline collaboration between distributed stakeholders, and enterprise-grade security features give IT the tools they need to protect company data - so your team can deliver projects on time and on budget.

## ✓ Strengthen onsite collaboration

- Preview project schedules, blueprints, and change orders on the go
- Effortlessly sync files to devices for offline access
- Upload and share photos directly from the worksite
- Request files from clients and contractors with just one link

## ✓ Work the way you want

- Integrations with business-critical applications like AutoCAD 360, PlanGrid, and Bluebeam Revu enhance existing workflows
- Seamlessly share CAD files, BIM models, and project files of any size, in any format, on any OS
- Simplify employee management using Single Sign-On, Active Directory, and Groups

## ✓ Protect company information

- Robust security infrastructure and 256-bit AES encryption protects data in transit and at rest
- Remote wipe and account transfer simplify offboarding processes, enable admins to retain ownership over company data
- Comprehensive audit logs allow admins to proactively monitor internal and external sharing

Dropbox for Business is a favorite solution for construction companies and their employees
