Dropbox Business

Your team's best work, in one place

More and more organizations are discovering how Dropbox Business transforms workflows when deployed to the entire company. With a wall-to-wall Dropbox Business implementation, it's easier than ever for teams in different departments to collaborate. A fully adopted, company-wide solution also gives IT complete control of how data is shared inside and outside your business, offering unparalleled security that's easy to manage.

Say "goodbye" to shelfware

More than 50% of employees want to choose the tools they use at work. That's why we modeled Dropbox Business on the simple but powerful experience that over 400 million users love. Dropbox Business also integrates with the tools employees use most, so you can count on complete adoption.

- Dropbox delivers the same best-in-class performance across all platforms and devices

- 400 million users rely on Dropbox to work together across 8 million businesses

- G2 Crowd users give Dropbox 4.4 out of 5 stars — the highest rating for any file sync and share business software

- Dropbox fits into existing workflows with an ecosystem of 300,000 app integrations

FOURSQUARE

"Having all of our files local on everyone's machine and backed up regularly is invaluable. Our rule of thumb has become: if it's not in Dropbox, it doesn't exist."

Eric Friedman, Director of Sales and Revenue Operations

Improve collaboration across teams

It's not surprising that less than half of workers think sharing across solutions is easy: it's tough working with different products, devices, and offices. Dropbox Business connects these silos, so employees can collaborate freely with each other and with external partners.

- Ensure files or versions are never lost with unlimited version history and deletion recovery

- In Microsoft Office, you can see if someone is viewing or editing a file you're working on, and update to their latest saved version with Dropbox badge

- Enhance workflows with previews across devices, and use annotations to collaborate on any file type

- Make external sharing simple, convenient, and secure with shared links

Get full visibility and data control

Files are spread across more than two devices and five collaboration solutions on average - which makes securing company data challenging for IT. Dropbox Business works across tools to keep data safe on any device, all while the oversight and controls that IT needs.

- Monitor audit logs for company-wide visibility into data being shared inside and outside your organization

- Manage external sharing with team-wide sharing permissions, passwords and expirations on shared links, and the ability to disable links

- Unlink and remotely wipe devices if they're lost or stolen, or when employees leave the company

- Leverage Dropbox Business API to enable DRM, e-Discovery, and other custom workflows

Simplify team management at scale

Dropbox Business scales with your company to manage a team of any size, from onboarding to analytics to device management. Integrations with trusted identity providers and SSO partners make it easier than ever to provision accounts and manage devices, all while saving staff time.

- Manage your IT team more effectively with tiered admin roles

- Control file access at scale and streamline onboarding with Groups

- Use account transfer to transition files from one employee to another during offboarding

- Integrate with Dropbox Business API partners to enable SIEM, DLP, and SSO

Dropbox works for every department

From design to legal, Dropbox Business transforms workflows across the enterprise.

✅ **Sales**
- Enable field teams with mobile apps and offline access
- Send customers contracts and track downloads
- Download reports from CRM, analyze, and share

✅ **Finance**
- Review and edit spreadsheets — even on mobile devices
- Use shared links to push out invoices and purchase orders
- Share sensitive financials using granular controls

✅ **Legal**
- Streamline back and forth red-lining
- Securely share case files and contracts
- Integrate Dropbox into e-Discovery

✅ **Marketing**
- Preview and edit large video files for ad spots
- Track or revert changes to the latest campaign copy
- Share product overviews with the sales team as read-only

✅ **Design**
- Upload and share files without size limits
- Share docs with freelancers and agencies
- Preview and comment on creative files on-the-go

✅ **Human Resources**
- Collect and organize employee documents with file requests
- Send materials to candidates using links with custom branding
- Sign contracts and offer letters with e-signature integrations
